## Building on NixOS

Follow instructions in [README](#)

## Building on another distribution

Installing **nix** is required. Use following instructions as root (best to use virtual machine as a builder):

```
useradd nix
groupadd -r nixbld
for n in $(seq 1 10); do
    useradd -c "Nix build user $n" \
            -d /var/empty -g nixbld -G nixbld -M -N -r -s "$(which nologin)"
nixbld$n;
done
mkdir /nix
chown -R nix /nix
su -c "bash <(curl https://nixos.org/nix/install)" nix
# source nix env
. ~nix/.nix-profile/etc/profile.d/nix.sh
```

Proceed with instructions in [README](#)
